

DR. ROBERT M. SAPOLSKY

Science and Nature Writer, Biologist and Neuroscientist, and Stress Expert

As a boy in New York City, Robert M. Sapolsky dreamed of living inside the African dioramas in the Museum of Natural History. By the age of twenty-one, he made it to Africa and joined a troop of baboons. Although the life of a naturalist appealed to him because it was a chance to "get the hell out of Brooklyn," he never really left people behind.

In fact, he chose to live with the baboons because they are perfect for learning about stress and stress-related diseases in humans. Like their human cousins, baboons live in large, complex social

groups and have lots of time, Dr. Sapolsky writes, "to devote to being rotten to each other." Just like stressed-out people, stressed-out baboons have high blood pressure, high cholesterol, and hardened arteries. And just like people, baboons are good material for stories. His gift for storytelling led *The New York Times* to suggest, "If you crossed Jane Goodall with a borscht-belt comedian, she might have written a book like *A Primate's Memoir*," Dr. Sapolsky's account of his early years as a field biologist.

The uniqueness of Sapolsky's perspective on the human condition comes from the ease with which he combines his insights from the field with his findings as a neuroscientist. For more than thirty years Sapolsky has divided his time between field work with baboons and highly technical neurological research in the laboratory. As a result, he can effortlessly move from a discussion of pecking orders in primate societies (human and baboon) to an explanation of how neurotransmitters work during stress—and get laughs doing it.

"One of the finest natural history writers around."

— New York Times

"Dr. Sapolsky was everything you promised and more. I have been to a number of fine events involving distinguished science writers, but I don't believe I have ever seen a speaker better able to connect with his audience."

— Butler University

The problem for people, as Dr. Sapolsky explains in his book *Why Zebras Don't Get Ulcers*, is that our bodies' stress response evolved to help us get out of short-term physical emergencies—if a lion is chasing you, you run. But such reactions, he points out, compromise long-term physical health in

favor of immediate self-preservation. Unfortunately, when confronted with purely psychological stressors, such as troubleshooting the fax machine, modern humans turn on the same stress response. "If you turn it on for too long," notes Sapolsky, "you get sick." Sapolsky regards this sobering news with characteristic good humor, finding hope in "our own capacity to prevent some of these problems...in the small steps with which we live our everyday lives."

The humor and humanity he brings to sometimes-sobering subject matter make Dr. Sapolsky a fascinating speaker. He lectures widely on topics as diverse as stress and stress-related diseases, baboons, the biology of our individuality, the biology of religious belief, the biology of memory, schizophrenia, depression, aggression, and Alzheimer's disease.

Dr. Sapolsky is a MacArthur "Genius" Fellow, a professor of biology and neurology at Stanford University, and a research associate with the Institute of Primate Research at the National Museum of Kenya. In 2008, *National Geographic* & PBS aired an hour-long special on stress featuring Dr. Sapolsky and his research on the subject. In addition to *A Primate's Memoir*, which won the 2001 Bay Area Book Reviewers Award in nonfiction, Robert Sapolsky has written three other books, including *The Trouble with Testosterone*, *Why Zebras Don't Get Ulcers*, and *Monkeyluv and Other Essays on our Lives as Animals*. His articles have appeared in publications such as *Discover* and *The New Yorker*. Dr. Sapolsky was awarded Rockefeller University's Lewis Thomas Prize for Writing about Science for 2008. He is currently working on a book to be titled: *Human Aggression, Human Compassion and the Ambiguities of Biology*.

"Robert Sapolsky is one of the best scientist-writers of our time, able to deal with the weightiest topics both authoritatively and wittily, with so light a touch they become accessible to all."

— Dr. Oliver Sacks
